

Look Beneath the Surface.

April 28, 2026

Induron Protective Coatings prioritizes the safety of people and the environment, guiding our practices and product development. We are aware of the concerns surrounding perfluoroalkyl and polyfluoroalkyl substances (PFAS).

Induron's ceramic technology-based epoxy coatings and linings (*PROTECTO 401, PERMASAFE POLE, CERAMAWRAP, CERAMAPURE PL-90, CERAMASAFE 90, PERMACLEAN 100, PERMACLEAN 100 SL, TL-70, RUFF STUFF 2100 CTE, CERAMPAPRIME*) are formulated to be PFAS free. No materials currently categorized or anticipated to be categorized as PFAS are utilized in the manufacturing process.

We remain vigilant in ensuring our products are free from these substances. Induron is actively involved in regulatory discussions through the American Coatings Association and will continue to monitor this issue. We are available to address any concerns or questions.
